

EBM DATABASES

Maryam Okhovati

COCHRANE LIBRARY

- The Cochrane Library is a collection of databases in medicine and other healthcare specialties provided by the Cochrane Collaboration and other organizations. At its core is the collection of Cochrane Reviews, a database of systematic reviews and meta-analyses which summarizes and interprets the results of medical research, which are often considered the “Gold Standard” for systematic reviews in terms of quality. A major resource for finding information on the effectiveness of health care interventions and it offers high-quality evidence for health care decision making
- a collection of six databases compiled by the Cochrane Collaboration and the NHS Centre for Reviews and Dissemination

- Canadian Medical Association
- NICE Clinical Guidelines
- National Institute for Health and Clinical Evidence, UK
- Evidence-Based Guidelines (Programs in Evidence-Based Care)
- Cancer Care Ontario
- Best Practice Guidelines: Registered Nurses Association of Ontario (RNAO)
- Guidelines (Through Clinical Key)

COCHRANE COLLABORATION

- Cochrane Database of Systematic Reviews / CDSR / Cochrane DSR Full-text of completed systematic reviews carried out by the Cochrane Collaboration, plus protocols for reviews currently in preparation. Reviews are updated in the light of new evidence and the date of the latest update is given. Database of Abstracts of Reviews of Effects (formerly Database of Abstracts of Reviews of Effectiveness) Especially written structured abstracts of quality-assessed systematic reviews published elsewhere in the medical literature. Cochrane Central Register of Controlled Trials / CCTR / CENTRAL References to randomised control trials (RCTs) identified through hand searching of journals and databases.

COCHRANE/SEARCH RULES

1. Expand your search using the truncation symbol * e.g. depress* finds depression or depressive, depressed etc. The truncation symbol can be used at the beginning and the end of your term.
2. * is also a wildcard to signify letter(s) within a word e.g. p*ediatric finds paediatric or pediatric. Note that singular and plural alternatives are automatically searched.
3. A question mark ? can be used to search for a single character.
4. To search phrases, put terms in quotes.
5. Combine and separate your search terms using the Boolean Operators AND or OR or NOT. 6. If combining phrases in the same line, enclose combination threads in parentheses.

COCHRANE/ SEARCH FOR YOUR TERM(S) USING

- MeSH terms
- Natural language

SEARCHING FOR YOUR TERM USING NATURAL LANGUAGE

- Advanced Search, Type your first term into the search box. Select Title, Abstract or Keywords from the drop-down menu on the left. If you wish to add another term, click on the + sign, situated to the left of the drop down menu, and another search box and drop down menu of Boolean operators will appear. Click on Go.

OR

- Enter the keywords one by one & click on Add to Search Manager after each word. Navigate backwards and forwards between the Search tab & the Search Manager until all your terms are present in the Search Manager, then combine them in the Search Manager. This option is useful if you intend to combine terms in Natural Language with your MeSH terms in your search strategy.

SEARCHING FOR THE TERM USING THE MEDICAL SUBJECT HEADINGS (MESH DESCRIPTOR)

- click on Advanced Search. Click on the Medical Terms (MeSH) search tab. Enter your first term into the Enter MeSH term box, and select any appropriate subheadings/ qualifiers from the drop-down menu in the Select MeSH qualifiers box. Click on Look Up. When you search for a term using the MeSH Thesaurus button, the database will search for all of the MeSH descriptors that contain your term. By selecting the MeSH descriptor through the thesaurus, the database will retrieve results containing the MeSH descriptor and related narrower terms
- the MeSH descriptor: Myocardial Infarction  Anterior Wall Myocardial Infarction; Inferior Wall Myocardial Infarction; Myocardial Stunning; Shock, Cardiogenic etc.).

SEARCHING FOR THE TERM USING THE MEDICAL SUBJECT HEADINGS (MESH DESCRIPTOR)

The next screen (see caption above) displays a definition of your search term, and Thesaurus matches, including synonyms of your search term, on the left. The central column shows you where your term sits in the MeSH tree, and enables you to explode one or more MeSH trees. 3. If you wish to search for the descriptor only, select the Single MeSH term (unexploded) option. If you wish to search for the descriptor and its narrower terms, select the Tree Number * box (es), and Explode either the selected trees or all the trees. 4. The box on the right shows you how many results in total there are for that specific search. Click on Add to Search Manager. 5. Repeat this procedure until you have entered all your search terms and are ready to combine your searches in the Search Manager tab

UPTODATE

- UpToDate is a comprehensive clinical decision support resource used by professionals around the world to diagnose and treat specific health issues. It contains a range of information and is designed to be used at the point of care.
- UpToDate includes more than 7400 peer-reviewed topics; these are written by 3800 physicians who are experts in their respective fields. Each review is linked to Medline abstracts and a complete drug information database. An updated version of UpToDate is released every four months.

What's New

Beta-blockers in pregnancy and risk for congenital heart defects (November 2018)
Use of beta-blockers during pregnancy has been associated with an increased risk for congenital heart disease in offspring, but...
[Read more](#)

INTRODUCTION

This topic will discuss the treatment of hypertension in pregnant and postpartum women. Other aspects of pregnancy complicated by hypertension are reviewed in separate topics, including, but not limited to:

- (See "[Preeclampsia: Clinical features and diagnosis](#)".)
- (See "[Preeclampsia: Management and prognosis](#)".)
- (See "[Preeclampsia: Prevention](#)".)
- (See "[Eclampsia](#)".)
- (See "[Gestational hypertension](#)".)

Preeclampsia-eclampsia – Preeclampsia refers to the syndrome of new onset of hypertension and proteinuria or new onset of hypertension and end-organ dysfunction with or without proteinuria (table 1), most often after 20 weeks of gestation in a previously normotensive woman [1]. Eclampsia is diagnosed when seizures have occurred.

UPTODATE

- Click in the **Search UpToDate** box to search again.
- Click on the **What's New** tab to read summaries of the latest major medical findings within each specialty.
- Click on the **Patient Info** tab to access a list of available topics for downloading for patients.
- **Graphics** in UpToDate are denoted by phrases such as "show figure 1". You can access any graphic by clicking on these links. Graphics included in a topic review are also listed at the bottom of the topic outline.
- Click on a **drug name** in a topic review to access usual dosage, adverse reactions and more. You can also search for a drug name by typing it into the New Search box.

CLINICALKEY

Why clinicalkey:

- thousands of Elsevier's medical books, textbooks and very current journals
- Procedures Consult's procedural videos
- the First Consult POC information
- additional videos and images, practice guidelines, patient handouts, and drug information from Clinical Pharmacology
- thousands of clinical and other medical images and videos
- CME credits via the Cleveland Clinic

HOW TO GET INFORMATION FROM CLINICALKEY

- Search
- Browse

HOW TO GET INFORMATION FROM CLINICALKEY/ BROWSE

1. Access the ClinicalKey BROWSE menu
2. Select the desired Browse content type option.
3. The BROWSE RESULTS page displays for the selected content type.
4. Locate the desired content item using any combination of the following:
 - Enable checkboxes in the FILTER BY menu, located on the left side of the page. Filter by options vary, depending on the content type.
 - Enter a full or partial title in the Find List by Title field. As you type, ClinicalKey uses “smart search” functionality to automatically display suggestions.
 - Click an alphabet letter link to filter the list alphabetically.
 - Use the scroll bars to navigate through the list.
5. Click the title link of the desired item to view its full content.

HOW TO GET INFORMATION FROM CLINICALKEY/SEARCH

1. Access the ClinicalKey Search Bar
2. Select a content source from the CONTENT TYPE drop down menu options.
3. Enter a full or partial search term in the Search field. Note: As you type, ClinicalKey uses “smart search” functionality to automatically display suggestions.
4. Click a link from the Suggestions drop down options.
5. The SEARCH RESULTS page
6. Locate the desired content item
7. Click the title link of the desired item to view its full content.

OVID/BASIC SEARCH

- Take your search question and remove the smaller connecting words, such as **in, the, on, for**. Keep the words related to the main concepts of your search. You do not need to include, and should not use, synonyms, Boolean operators (**OR / AND**), or truncation (*). Ovid will do this for you. In general, phrase searching should also be avoided.
- Type your simple search string into the search box.
- Tick the box next to **Include Related Terms**
- Click **Search**

26. **Opioid** endocrinopathy: a clinical problem in patients with chronic pain and long-term oral **opioid** treatment.

Rhodin A; Stridsberg M; Gordh T.

Clinical Journal of Pain. 26(5):374-80, 2010 Jun.

[Journal Article. Research Support, Non-U.S. Gov't]

UI: 20473043

BACKGROUND: The use of strong **opioids** for **treatment** of noncancer chronic pain has increased. However, strong evidence for sustained pain relief and improved function is lacking. Controversy prevails, whether hormonal changes are induced by long-term **treatment** with **opioids**. The purpose of this study was to investigate the occurrence of **endocrine** dysfunction in chronic pain patients on long-term **opioid** **treatment**.
